Tube & Pipe
Bending Machines

We purchased a Bema CNC tube bending machine from an Italian supplier. Unfortunately, after sales support in the UK was limited so we had to find an alternative company who could support us when we had a problem.

One day our CNC controller failed and was no longer supported, finding support and spare parts was extremely difficult. The controller needed updating and it appeared a straight retrofit was not possible.

We came across Tube and Pipe Bending Machines, run by John Owen and Craig Webster and they were able to help by retrofitting the Phenix MORE Control.

It was clear that they had many years' experience of working with tube bending machines and were able to fit the controller in a relatively short period of time.

Our operators were given full training by Craig and very quickly became familiar with the controls. Our machine went from being virtually scrap to producing quality parts with a lot more control over the bending axis.

The control has proven to be reliable and to this day the machine continues to produce good quality parts.

I would not hesitate to recommend John and Craig when you are considering updating your machine.

Jason Duval, Production Director
